

"The dream is still alive."

RAJASTHAN

unicef  for every child

Post the first case of COVID-19 was detected in Rajasthan a few days later, few hotspots were identified as cases started coming up from various parts of the state.

A containment zone planning was carried out by a high-level technical team.

Bhilwara, Banswara, Jhunjhunu & Jaipur were initially identified as hotspots.

UNICEF extended support in containment planning, capacity building and monitoring of implementation at the ground level. House to House survey and training on digital survey were conducted.

Support was provided in the monitoring of COVID-19 preparation, forecasting and planning for different scenarios with the help of the government officials.

The state with the help of UNICEF was proactive in its data analysis and forecasting for better planning and tracking of COVID-19.

UNICEF, in partnership with WHO and UNFPA, adapted a systematic way of designing COVID-19 protocols.

Strong advocacy technique was adapted for the mainstreaming of RMNCH + A services with COVID-19 and resuming essential Maternal, Newborn and Child health (MNCH) services at the community level with online learning webinars.

Extensive support was provided in establishing strong supportive supervision mechanism and regular feedback sharing structure with interactive dashboards, videos and webinars.

System strengthening support was given for community engagement planning and sector level factsheet for review wherein more than 5,000 sector meetings were monitored.

More than 1 lakh sessions were monitored during the last 6 months, more than 7 lakh pregnant women were reached and more than 7 lakh children were vaccinated during the same period.

Overall, almost 60,000 health workers were trained on COVID-19 related topics.
